**********Draft**********

Principal component analysis (PCA)

09/04/19

**********Draft**********

Test run Tue 03 Sep 2019 09:26:52 PM MDT
The files subimg.m & im1.m are needed to determime
the values needed to extract from the 128 x 128 to 50 x 50.
when determining the thumb0000.pgm from thumb0000.bmp.
This needs to be run on a stetch version of octave.

The number of cables causes a problem positioning and keeping the
camera in the correct position.

Belt speed, and camera postion are very critical in determining the feature
value obtained.
Feature #0: (24.000000,25.000000) with value of 125.

*************Draft*************

Took the 128 x 128 from the camera and wrote a subimage of 50 x 50 to the file thumb0000.pgm.
This 50 x 50 image was processed with example1.c which both img1 & img2 used thumb0000.pgm.
the images in data/savedklt090219 r1* are with a cracked pistachio crack is on the right.
0 | (25, 24)= 285
the images in data/savedklt090219 r2* are with a not cracked pistachio
0 | (24, 24)= 45
the images in data/savedklt090219 r3* are with a cracked pistachio crack is on the left.
0 | (24, 25)= 101
the image in data/savedklt090219 r4* are with a cracked pistachio now the code from example1.c is included in exe1.c increased the -t variable from 275 to 300 msec which moves the pistachio into the field of view.

************Draft************

Principal component analysis (PCA)

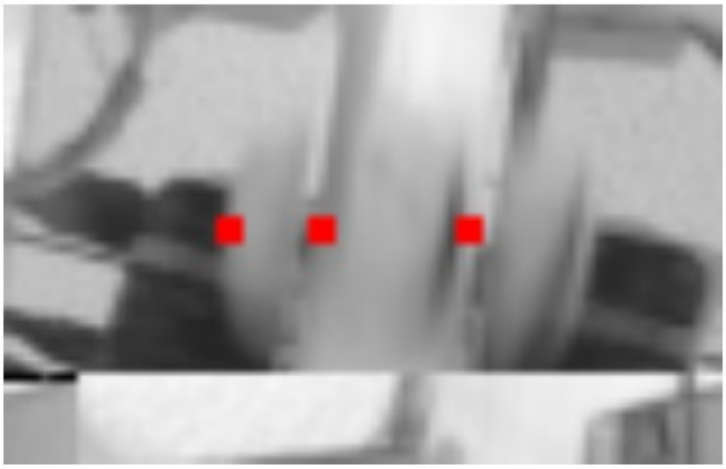
08/31/19

************Draft************

Created a smaller set of images which were a cut from thumb0000yes1.pgm & thumb0000no1.pgm. These were then used in example1.c.

Thumb0000yes1sm.pgm

Thumb0000no1sm.pgm



The image above is 78 x 50 zoom of 476%.

Feel free to place comments here.

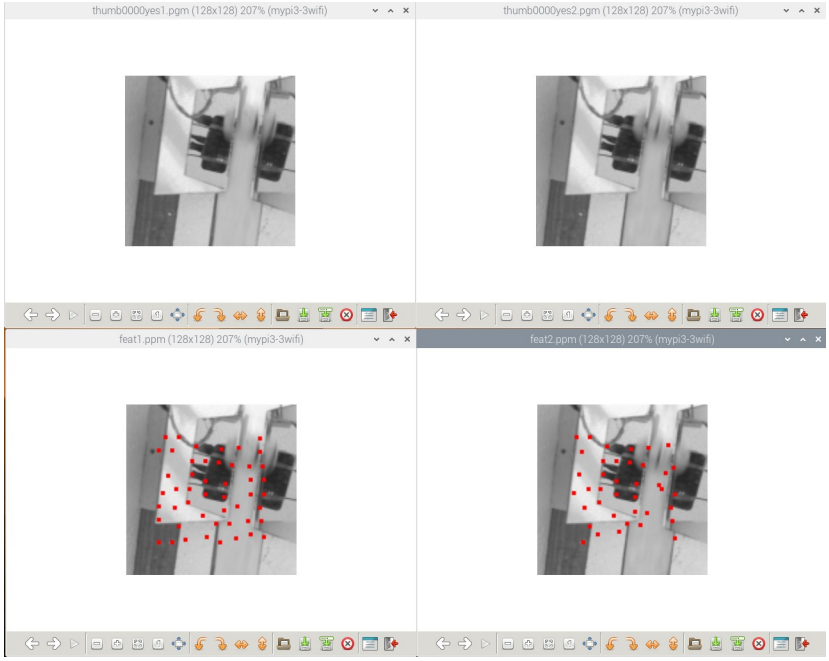
**********Draft**********

Principal component analysis (PCA)

08/31/19

**********Draft**********

Looking the feature extraction from ultibo_numlib/klt. Converted the 4 test images bmp images to pgm which was the format that was used.
Modified example1.c to use thumb0000yes1.pgm and thumb0000yes2.pgm



feat1.txt

************Draft************

Principal component analysis (PCA)

08/29/19

************Draft************

Principal component analysis (PCA) is a statistical procedure that uses an orthogonal transformation to convert a set of observations of possibly correlated variables (entities each of which takes on various numerical values) into a set of values of linearly uncorrelated variables called principal components.

Machine Learning — Singular Value Decomposition (SVD) & Principal Component Analysis (PCA)

Analysis of 4 images 2 cracked and 2 not cracked. The (SVD) or (PCA) does appears to track that pistachios that are cracked do have a higher (PCA) than pistachios that are not cracked.
